WORK EXPERIENCE

AB Investments **Remote**

Software Engineer/ Web scraper (Contract) *April 2026 – Present*

- Developed the Property Management Operations System (PMOS), a custom Kanban-style internal operations board with role-based access for managing leasing, maintenance, unit turns, and tenant escalations.
- Engineered an automated "Organic Driving for Dollars" data pipeline that ingests property listings, geocodes addresses, queries county GIS data for street parcels, and performs skip tracing to generate compiled lead sheets with zero duplicates.
- Created a custom Discord bot integrated with the Google Sheets API to automate the logging and tracking of incoming team messages and property leads directly into a master spreadsheet.
- Implemented and deployed automated web scrapers and market lead generation tools to streamline the acquisition of real estate data and property listings.

Tech Stack: Typescript, Node.js, PostgreSQL, Prisma, Express, Discord.js, Google Sheets API, Cheerio

TM Labs **Remote**

Lead Backend Engineer (Contract) *April 2025 – August 2026*

- Implemented payment processing with Stripe, including session creation and webhook handling for eSIM product fulfillment.
- Integrated eSIM provisioning logic using 3rd party services, including retrieval of order numbers and profile data, and developed services for top-up operations with robust transaction tracking.
- Implemented new database models, to keep track of eSIM purchases as well as store user data packages usage information.
- Engineered a USD-to-NGN virtual card payment system enabling cross-border payments into user's naira wallets using Stripe onRamp, serving international users with seamless, compliant funding flows.
- Led integration of end-to-end KYC verification using Sum-Sub, enabling compliant digital identity checks and automating user onboarding workflows for regulated customer verification.
- Worked on the launch of the core payment application, including migration from a legacy virtual card platform to the main production app, ensuring seamless continuity and zero disruption to user's funding flows.

Tech Stack: Typescript, Postgres, Docker, Sum-sub Stripe, Prisma, Yellowcard and Fern

Ajarra **Remote**

Lead Backend Engineer (Contract) *May 2025 – November 2025*

- Integrated Google, Apple, and Facebook OAuth with secure JWT tokens, streamlining user login and raising new-account conversions.
- Implemented Twilio SMS OTP verification during sign-up and sensitive operations, bolstering account security and reducing unauthorized sign-ups.

- Engineered robust session tracking to capture user interactions, enabling real-time analytics and improving engagement.
- Migrated real-time chat storage from PostgreSQL to Redis Pub/Sub, reducing message latency and improving scalability.
- Designed automated payout and escrow workflows using Flutterwave and Paystack, ensuring secure vendor payments until event completion and reducing manual processing errors.
- Developed comprehensive admin dashboard with analytics and contract-management features, giving vendors and organizers real-time event insights and automating agreement workflows.
- Migrated backend infrastructure from Render to a Contabo VPS and configured CI/CD pipelines using GitHub Actions, resulting in faster deployments and increased system reliability.

Tech Stack: Typescript, Prisma, Postgres, Dojah, Flutterwave, Paystack and Contabo

Loopit **Remote**

Full Stack Developer (Contract) *Oct 2024 – April 2025*

- Designed and implemented a RAG solution using the Create-llama framework, and extracted and stored Slack data in a Pinecone Vector database which led to increase in query performance by 70%.
- Used the Gemini embedding model in the Llama Index framework to vectorize Slack channel messages, achieving a 60% increase in embedding accuracy compared to traditional embedding models.
- Developed the frontend using React and TypeScript to create an intuitive, responsive user interface for viewing and interacting with the vectorized data leading to a 30% improvement in user engagement.

Tech Stack: Typescript, React, Create-llama, Llama index, Pinecone

Norm **Remote**

Full Stack Developer *Jan 2024 – Oct 2024*

- Migrated backend infrastructure from Prisma ORM to Flask leading to a 30% reduction in response time and improvement in systems scalability by 25%.
- Implemented new database models which improved data integrity by 40%, reduced data related errors, and led to a 20% increase in system reliability.
- Utilised fabric.js to design and manipulate canvas objects supporting complex animations, enabling users to create dynamic and interactive web graphics.

Tech Stack: Typescript, React, Flask, Prisma, Postgresql, Shadscn

Decorp **Remote**

Software Engineer (Contract) *March 2024 – June 2024*

- Setup an e-commerce application on Coolify VPS using MedusaJS, reducing costs by up to 50% and improving scalability and performance by 30%.
- Configured PostgreSQL and Redis on Coolify, enhancing database query efficiency by 30% and reducing latency by 20%.
- Deployed PostgreSQL using Docker containers, achieving a 35% reduction in deployment time and a 20% increase in portability.
- Developed a React form with Multer for file uploads, allowing for concurrent uploads of large files

Tech Stack: Medusa, Nextjs, Postgresql, Redis, Docker, Coolify, Typescript

The Ginger Collective **Lagos. Nigeria**

Full Stack Developer *January 2023 – January 2024* •

Engineered and deployed multiple full-stack web applications, optimizing performance and enhancing system responsiveness by approximately 10%.

- Seamlessly integrated third-party services—payment gateways, geolocation APIs, SMS providers—resulting in a 21% enhancement in system interoperability.
- Spearheaded Agile/Scrum adoption, increasing team delivery velocity by 17% and dramatically slashing rework.
- Boosted backend throughput by 22% through strategic database schema redesign and more efficient ORM operations.

Tech Stack: React, Nextjs, MongoDb, Typescript, Postgres, Prisma

Ibom Airport Development Company **Uyo, Akwa Ibom**

Engineering Intern *March – August 2020*

- Produced daily system status reports on navigation equipment, improving monitoring efficiency by 10%.
- Managed the transfer of critical information between the safety unit and the control tower, enhancing communication reliability.
- Participated in routine maintenance checks of the service cabin and airfield lighting systems, contributing to an uptick in operational uptime.
- Created detailed technical documentation, improving troubleshooting processes and reducing resolution times by 20%.

EDUCATION

Covenant University, Ota, Ogun
BSC. Industrial Physics (*2017 – 2021),* 4.18/5.0

Baze University, Abuja
MSC. Computer Science with specialization in Cybersecurity (*2022 – 2023),* 4.2/5.0

PROJECT EXPERIENCE

Ragie AI Slack Connector **Remote**

Full Stack Developer *December 2024 - January 2025*

- Designed, developed and deployed a Retrieval Augmented Solution application with Slack Integration for slack channel messages retrieval.
- Utilised Ragie api for message upload as documents and chunks retrieval.
- Integrated the Groq model for generating responses to user queries.
- Developed the frontend using Vue.js and TypeScript, enhancing UI responsiveness and deployed on vercel.
- Built the backend using Node.js and TypeScript and deployed on Render cloud platform.
- Configured Postgres and Adminer on docker-compose and hosted docker-compose container on an EC2 instance.
- Implemented database migrations using Sequelize CLI.
- Implemented authentication using JWT tokens.

Tech Stack: Vuejs, Typescript, Nodejs, Postgres, Docker, Aws, JWT, Groq api, Slack api and Ragie api.

Copy-Chain (Vscode Extension) **Remote**

Software Engineer *April 2025*

- Designed, developed, and deployed a VS Code extension, "Copy-Chain" to enhance copy-paste functionality with WebAssembly integration.
- Utilized Haskell for robust and type-safe backend development, compiled to WebAssembly for seamless integration with VS Code.
- Implemented advanced clipboard management features, including chain copy and buffer clearing, with intuitive keyboard shortcuts (Ctrl+C and Ctrl+Shift+C).
- Developed the frontend using the VS Code Extension API, ensuring smooth user interaction and integration with the editor.
- Configured the extension's build process using TypeScript, esbuild, and npm scripts, ensuring efficient development and deployment workflows.
- Wrote unit tests and integrated linting tools (ESLint) to maintain code quality and reliability.

Tech Stack: Haskell, Asterius, WebAssembly, Typescript and Mocha

FitFlex Pro **Remote**

Full Stack Developer *September - December 2023*

- Led the design of an application that allowed users to create custom workouts regimens, with additional CRUD functionalities.
- Utilised React and JavaScript to enhance front-end functionalities.
- Developed the backend using Rust and the Warp framework, adhering to RESTful principles for efficient and scalable API design.
- Implemented data storage and retrieval functionalities using MongoDb in the applications backend.
- Dockerized the application to ensure a consistent environment during development and ease of deployment.

Tech Stack: React, JavaScript, Rust, Warp, MongoDb, Docker

Voting Application (Post-grad Thesis Project) **Remote**

Web3 Developer *June - August 2023*

- Developed an electronic voting application that allowed users to electronically cast votes securely on the Ethereum blockchain.
- Utilised Solidity to build the voting smart contract on the Sempolia testnet and integrated with Metamask for seamless user interaction.
- Implemented robust testing by leveraging Chai and Mocha libraries to ensure the reliability and correctness of the smart contract functionality.

Tech Stack: React, JavaScript, Solidity, Metamask, Sempolia testnet, Chai and Mocha

SKILLS

Programming Languages: JavaScript(ES6+), Solidity, Typescript, Haskell, Rust, C# and Java (Spring Boot)

Web Technologies: MongoDb, Express, Reactjs, Nextjs, HTMX, Nodejs, Etherjs, Redux, Postgresql, Prisma, Warp and Docker

Tools: GIT/GitHub, Postman, Figma
